

Scooby's Kitchen

Questions for the client — before we build Payments, Orders, Products, Theme, Website Features & Doctor Onboarding

1 Payment System (Razorpay)

We're planning to use Razorpay for payments. Applying directly on their website usually takes 1–2 days to get approved. A few things we need from you before applying:

- Do we have a GST-registered business already, or does this need to be set up first?
 - The bank account used for settlements must be registered in the **same name as the company** — is our company registration name finalized, and does a matching bank account already exist?
 - Who will be the point of contact for KYC documents (PAN, GST certificate, bank proof, address proof)?
 - Any preference between Razorpay, Cashfree, or another gateway, or is Razorpay confirmed?
-
-
-

2 Order & Delivery System

Before the order system can go fully live, we need to lock in which courier/logistics partner(s) we register with — this affects shipping cost calculation, tracking, and delivery timelines shown to customers.

- Which courier/logistics partner do you want to use — Shiprocket, Delhivery, or another aggregator?
 - Do you want one partner, or should we support multiple (for cost/coverage comparison)?
 - Is there an existing account with any courier service, or do we register fresh?
 - What delivery regions do we support at launch — pan-India, or specific states/cities first?
 - What are acceptable delivery timelines to promise customers (e.g. 3–5 business days)?
-
-
-

3 Product Catalogue

To build out the product pages and admin catalogue correctly, we need the actual product lineup and details:

- How many products (SKUs) are we launching with?
- For each product: name, category (e.g. Puppy / Adult / Senior / Working breed), detailed description, and price.
- Do we have product photography ready, or do we need to plan a shoot?
- Will each product have multiple pack sizes (e.g. 1kg / 3kg / 5kg) with different pricing?
- Any products planned for later phases we should design the system to support (e.g. treats, supplements)?

4 Theme, Logo & Visual Direction

We want the site's imagery to feel unique and attention-grabbing rather than generic pet-brand stock photography.

- Should imagery focus only on dogs, or also cats and other pets?
 - Do you have a preferred visual style — real photography, illustration, or a mix?
 - Is there an existing logo, or should we design one as part of this project?
 - Any specific colors, moods, or competitor sites you like (or want to avoid)?
 - Do you have real photos of dogs/customers we can use, or should we plan a shoot / commission illustration?
-
-
-

5 Signature Website Feature — Recipe Fit Calculator

To make the site memorable, we're proposing a **Recipe Fit Calculator** as a standout, shareable feature.

How it works: Pet nutrition needs scale with body mass and activity level. The customer enters their dog's weight and activity level, and the calculator estimates daily caloric needs and recommends the best-fit formula.

Resting Energy Requirement	$RER = 70 \times (\text{weight in kg})^{0.75}$
Maintenance Energy Requirement	$MER = RER \times \text{activity multiplier}$

- Confirm we want to move forward with this calculator as the launch highlight feature.
 - Should the result directly recommend one of our specific products, or just show the calorie target?
 - Do we want to save results to the pet's profile (for returning customers) or keep it anonymous/one-off?
 - Any other unique features you'd like considered (e.g. subscription/auto-reorder, breed-specific quiz)?
-
-
-

6 Doctor Verification & Onboarding

Since the platform lets customers book vet consultations, we need a clear process for verifying and onboarding doctors.

Verification

- What documents should we collect for verification — veterinary degree/license, government ID, clinic registration, experience proof?

- How many days should the verification process take before a doctor is approved?
- Who reviews and approves — an internal admin team, or a third-party verification service?

After verification

- How do we inform the doctor once approved — email, SMS, or phone call?
- Will consultations be booked and paid through our platform only, or can customers also contact the doctor directly (phone/email/message) outside the platform?
- Do we set the consultation price, or does each doctor set their own?

Onboarding

- How do doctors apply — a signup form on the site, or do we manually recruit/invite them?
- Do we want a dedicated "Apply as a Vet" page, or is this handled offline for now (email/WhatsApp) until volume grows?

Prepared for discussion with client — Scooby's Kitchen project.
